Technically Speaking

Encompassed within every Avon motorcycle tyre is some of the world's most advanced tyre technology. It's what helps give Avon tyres their edge. This technology has been painstakingly developed and tested over many years and means that regardless of what type of bike you have and where you ride, you can have absolute faith in your tyres.

Hybrid Belt

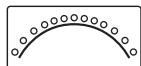

Ultra strong steel wires of different tensions bound together to make a tape component to form a unique belt system. This belt produces exceptional high speed stability while the flexibility and natural spring properties of steel translate into superb mechanical grip. This is our most advanced belt system yet.

TE (Tri-compound Extrusion)

Three different rubber compounds are extruded into each tread.

Compound 1 – A durable medium compound in the centre of the tyre for improved mileage.
Compound 2 – A soft compound on the edge of the tyre for maximum grip at high lean angles.
Compound 3 – A very soft low hysteresis compound across the entire base of the tread to improve the bond between the other two compounds and the carcass.

A-VBD (Advanced-Variable Belt Density)

Mainly for rear tyres, this is a jointless belt of ultra strong steel and/or aramid cables that are wound around the tyre's circumference. At the centre of the tread the cables are very closely spaced for maximum stability and high wear resistance. The strands are progressively spaced out towards the tread edge to produce the characteristics of a multi-compounded tyre i.e. hard compound in the middle and a soft compound on the edge.

ATAC-TA Tread Profile

(Advanced Tread Arc Combination – Tri Arc)
 ATAC varies the tread profile across the tyre for the ultimate in handling and stability however far over your bike is. Works in tandem with A-VBD.

IFG (Inverted Front Grooves)

For the front tyre, a system pioneered by Avon in the late eighties and only now being adopted by the competition, resists 'stepped-wear' and cupping to deliver smooth handling throughout the tyre's life. By significantly reducing uneven tread wear, a further advantage of the IFG configuration is improved wet braking and shorter stopping distances.

RF (Reactive Footprint)

Reactive Footprint technology marries Avon's unique ATAC profile, ES and LPE systems (see below) to produce a footprint which changes size and shape depending on the bike's lean angle for the full life of the tyre. The result is a contact patch that grows as the bike leans, giving more grip in corners. It is also enhanced by Avon's unique variable belt density A-VBD.

SRS-Compound (Super Rich Silica-Compound)

Compounds formulated with large amounts of silica offer enhanced grip in wet and cold conditions. This produces extra grip when the tyre is cold but also reduces excessive heat build up which can affect mileage.

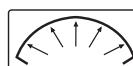

Race-C

Compounds optimised for track performance.

EAF Pattern (Enhanced Aqua Flow)

Front and rear tread patterns are computer designed for maximum throughput of water within the tyre footprint. This propels water away from the contact patch hence aiding water dispersion and maximising wet grip.

ES System (Enhanced Stability System)

The carcass, sidewall and tread pattern are designed to work in harmony so that the stresses absorbed by the tyre are distributed evenly. This reduces localised flexing within the tyre's structure. The result is an increase in grip and stability while at the same time reduces tread wear.

LPE (Lifetime Profile Engineering)

This works in conjunction with ATAC to produce a tyre profile and footprint which even when worn, gives consistent handling and stability for the full life of the tyre.

FFG (Force Following Grooves)

Grooves that work in tandem with the forces being transmitted through the tyre at various lean angles for increased wear resistance, optimum water dispersal, reduced tyre noise and improved mileage.

SBC System

'Spiral and Belted Carcass'. A high level of grip puts high loads through the tyre's carcass; the SBC System features ultra-tough belts underneath the 0 degree belt of A-VBD to cope with the extreme stresses.

WCTA (Wide Custom Tread Arc)

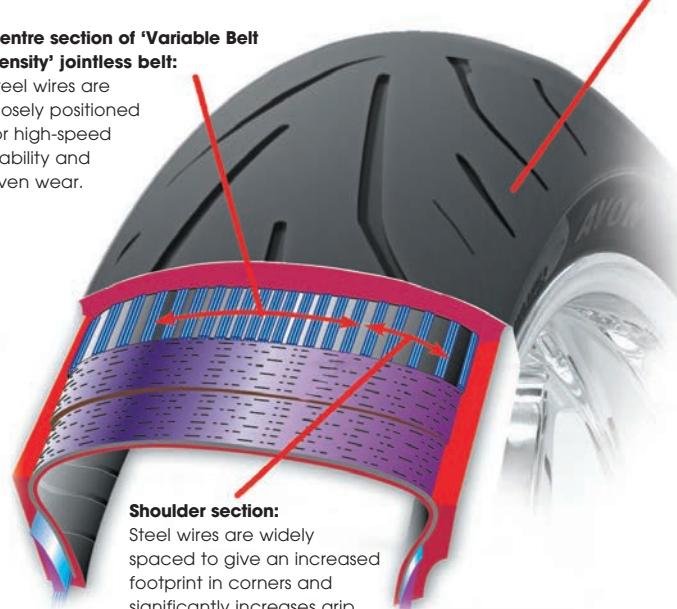

A profile for improved manoeuvrability at all speeds.

3D siping: Interlocking three dimensional points hidden in the sipes to improve stability and grip, limit tread flex and allow the tyre to warm up quickly.

Centre section of 'Variable Belt Density' jointless belt:

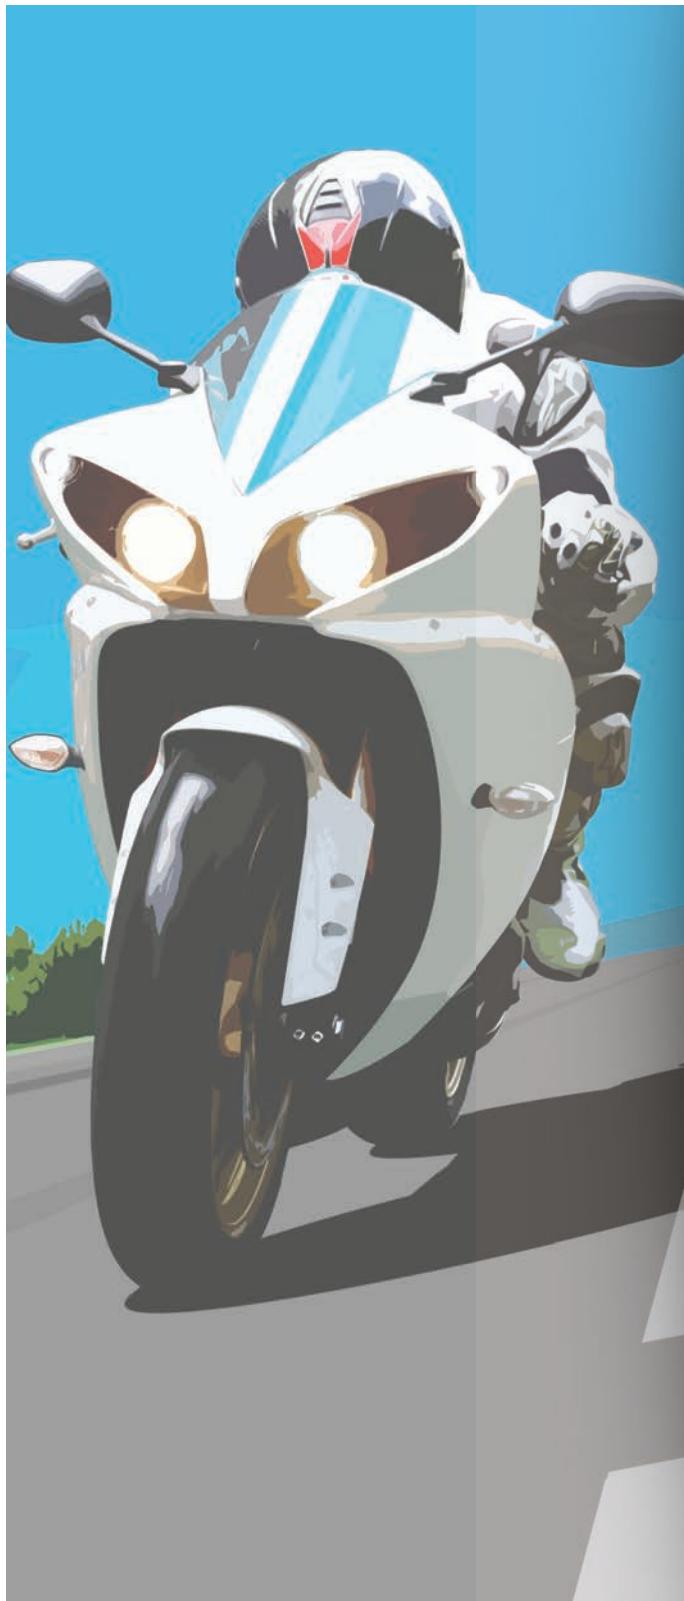

Steel wires are closely positioned for high-speed stability and even wear.

3D Ultra Xtreme

- Road legal race tyre
- Superb dry weather performance thanks to super-sticky rubber compound
- Very quick to reach working temperature
- Large footprint at extreme lean angles
- 3D siping with interlocking three dimensional points to improve stability and grip, limit tread flex, and allow the tyre to warm up quickly

JAMES FOLKARD 2015 GP2 SUPERTWIN CHAMPION

Race win statement.

3D siping: Interlocking three dimensional points hidden in the sipes to improve stability and grip, limit tread flex and allow the tyre to warm up quickly.

ROB HODSON 2015 MANX SUPERTWIN CHAMPION

Available in three compound options:

Front - AC1 & AC3

Rear - AC2 & AC3

AC1 = Supersoft

AC2 = Soft

AC3 = Medium

Race win statement.

3D Ultra Supersport

- Superb performance on the road
- Can also be used for trackdays
- High performance tread compound
- Precise handling characteristics
- 3D siping with interlocking three dimensional points to improve stability and grip, limit tread flex, and allow the tyre to warm up quickly
- Covered by Road Hazard Warranty (only available in UK and North America)

3D Ultra Sport

- Outstanding handling characteristics
- Large footprint at extreme lean angles
- High performance single and multi-compound Super Rich Silica (SRS) treads enhance wet grip
- Ideal for high performance bikes
- 3D siping with interlocking three dimensional points to improve stability and grip, limit tread flex, and allow the tyre to warm up quickly
- Covered by Road Hazard Warranty (only available in UK and North America)

3D siping: Interlocking three dimensional points hidden in the sipes to improve stability and grip, limit tread flex and allow the tyre to warm up quickly.

Hypersport Touring / Sport Touring

Hypersport Touring

Storm 3D X-M

- High performance plus extended mileage
- The X-M version will deliver 15%-20% extra mileage compared to the Storm 2 Ultra
- Interlocking three dimensional points hidden in the sipes to improve stability and grip, limit tread flex and allow the tyre to warm up quickly (3D Sipes)
- High performance single and multi-compound super rich silica tread enhances wet grip (SRS)
- Superb handling and stability characteristics
- Typical fitments: Suzuki Hayabusa, BMW K1300GT, Honda VFR 1200, Kawasaki GTR1400, Suzuki GSX1400
- Tri-compound Extrusion (TE) on rear tyres
- Covered by Road Hazard Warranty (only available in UK and North America)

Sport Touring

Storm 2 Ultra

- Performance plus mileage
- Storm 2 Ultra is an evolution of our award winning Storm range giving you more mileage and more grip
- Multi compound Super Rich Silica (SRS) treads give rear tyres an extra 12% mileage
- New technology is incorporated in the 0 degree belting system, improving dynamic stresses within the carcass
- This new technology not only increases mechanical grip, giving improved traction in both the wet and dry, but it also enhances handling and ride comfort
- Covered by Road Hazard Warranty (only available in UK and North America)

Street

Roadrider

- Large contact patch for excellent grip at all lean angles
- Comprehensive range of sizes – from modern to more traditional
- Performance upgrade for classic and vintage motorcycles

Rear

StreetRunner

- Specially designed for smaller CC commuter bikes
- Superb tyre life and all weather grip
- Impressive handling characteristics
- Latest technology in pattern design

*MT90-16 equivalent to 130/90-16 | **Reinforced StreetRunner manufactured outside the UK

Cobra

- Aimed at the power cruiser/touring/custom market
- Incorporates sports tyre technology for nimble handling
- Incredible stability and longevity – perfect for touring
- Extra wide sizes for custom bikes
- Excellent durable compound for increased mileage
- White wall tyre designed for the Thunderbird LT – 150/80R16 71V front and 180/70R16 77V rear

Triumph OEM

*Reinforced | **Special production only | □White Wall | *Triumph OEM tyre

TrailRider

- New Super Rich Silica Compound using the very latest compounding technology to enhance wet grip
- Multi-compound treads on radial rears to enhance mileage and grip
- Interlocking three dimensional points hidden in the sipes to improve stability and grip, limit tread flex and allow the tyre to warm up quickly - 3D Sipes (radial tyres)
- High tech carcass construction and next generation compounds deliver superb grip and handling
- 90% on-road, 10% off-road

TrekRider

- 50% on-road, 50% off road
- Great balance between on and off road performance
- Versatile construction for off road capability
- Specially formulated compound for multi-terrain

*Replaces 3.00-21

Classic

Speedmaster MKII (AM6)

- Classic ribbed front tyre
- Curved tread profile and ribbed pattern so typical of classic bikes
- Best used in conjunction with the Safety Mileage MKII rear tyre

Safety Mileage MKII (AM7)

- Classic block pattern rear tyre
- Available in a variety of different tread patterns designed to suit older bikes
- Modern rubber compounds deliver enhanced durability and performance
- Best used in conjunction with the Speedmaster MKII front tyre

AM20/AM21

- Accomplished all-rounder
- Tread pattern designed to give first class water dispersal under the contact patch.

Technical Data

The SERVICE DESCRIPTION consists of a Load Index and a Speed Symbol.

Speed Symbol

The SPEED SYMBOL indicates the maximum speed at which the tyre can carry a load corresponding to its Load Index under service conditions specified by Cooper-Avon Tyres.

These speeds are shown in Table 1 and apply to tyres when in good condition, inflated to the correct pressure, operating within their specific load capacity and fitted to the correct size rim. Speeds quoted are the maximum speed of which the tyre is capable, not the speed at which it is normally ridden. V, W and Z rated tyres may also be used at higher speeds but at reduced loadings. For guidance only Table 3 can be used to calculate loads at specific speeds on V, W and Z tyres.

ALL MAXIMUM SPEEDS REFERRED TO IN THIS DATA BOOK ARE SUBJECT TO APPLICABLE LEGAL SPEEDS.

Load Index

The LOAD INDEX is a numerical code associated with the maximum load a tyre can carry (except for loads at speeds above 130 mph (210 km/h) – see Table 2/2a) at the speed indicated by its Speed Symbol under service conditions specified by Avon Tyres. You should only fit replacement tyres bearing the precise speed and load index referred to in the motorcycle manufacturer's handbook. Before you make any variation please consult Avon Tyres to ensure that the replacement tyre is a correct fitment for your motorcycle.

Table 1 Speed Symbol

Speed Symbol	L	P	S	T	H	V	(V)	W	(W)	ZR
Max mph	75	93	112	118	130	149	>149*	169	>169*	>149
Max km/h	120	150	180	190	210	240	>240*	270	>270*	>240km/h*

Note: the maximum approved speed may be marked on the tyre eg V260.

*at reduced loading

161 (260)	–	–	85
168 (270)	–	–	75

Inflation Pressures

Basic pressures are quoted in Table 4 but, subject to agreement between the tyre and vehicle manufacturers, the pressures used in practice may be different. They shall take into account not only the load, but also the tyre construction, road holding, maximum speed, the orientation of the tyre, the operating conditions and the mechanical characteristics of the vehicle. In particular for higher speeds, increases in pressure are essential for safety reasons.

These increases are determined by agreement with the tyre manufacturer. In the absence of any such agreement, for speeds above 93 mph (150 km/h) the basic inflation pressure (bar) versus speed at the maximum load of the tyre, to be used for standard load tyres, is given in Table 4. The actual pressure is to be adjusted for the design maximum load acting on the wheel.

Table 4 Basic Inflation Pressure (bar) versus Speed at the maximum Load of the tyre

Speed Capability of the vehicle mph (km/h)	Speed Symbol								
	Q	R	S	T	U	H	V	W	Y
<99 (<160)	2.5	2.5	2.5	2.5	2.5	2.5	2.5	2.5	2.5
106 (170)		2.6	2.6	2.6	2.6	2.6	2.6	2.5	2.5
112 (180)			2.6	2.6	2.6	2.6	2.6	2.5	2.5

155 (250)								3.0	2.8
161 (260)								3.0	2.9
168 (270)								3.0	3.0
174 (280)									3.0
180 (290)									3.0
186 (300)									3.0

1.0 bar = 100kPa

Basic inflation pressure (bar) versus speed at the maximum load of the tyre, to be used for standard tyres in the absence of agreement with the tyre manufacturer (1) (2)

1 For intermediate maximum speeds, linear interpolation is permitted.

2 Rounding of the inflation pressure figures is performed to the nearest 0.1 bar. (In the case of Extra Load or Reinforced tyres, the figures in the above are increased by 0.4 bar).

Table 5 Metric/Imperial Size Conversion

Metric 90%	Metric 80%	Imperial	Imperial 90%
60/90	70/80	2.25	
70/90	80/80	2.50	
80/90	90/80	2.75/3.00	3.10
90/90	100/80	3.00/3.25	3.60
100/90	110/80	3.50	4.10
110/90	120/80	3.75/4.00	4.25/85
120/90	130/80	4.00/4.25	4.60
130/90	140/80 / 150/80	4.50/5.00	5.10
140/90	160/80	5.00	
150/90	170/80		

Care must be taken when fitting tyre sizes that are different to OE that the wheel rim is wide enough and that there is enough clearance for the tyre.

Alpha numeric/metric size conversion		Rim width equivalents	
Alpha numeric	Metric	WM	Inch
MH90	80/90	WM0	1.40

MU85/MU90	140/90		
MV85	150/80 / 150/90		

SAFETY WARNING: disregarding any of the safety precautions and instructions contained in this book may result in tyre failure or explosion causing serious personal injury or death.

How to get the best results from your tyres

SELECT THE CORRECT TYPE OF TYRE FOR YOUR MACHINE

Use combined information from owners handbook and tyre manufacturers fitment guide, to fit the correct tyres which meet with the motorcycles requirements.

PRESSURES ARE VITALLY IMPORTANT

Warning! Driving on any tyre that does not have the correct inflation pressure is dangerous. Keep your tyres inflated to the correct pressure for load and speed as shown in your motorcycle manufacturer's handbook. Any underinflated tyre builds up excessive heat that may result in sudden tyre destruction. The correct inflation pressures for your tyres must be maintained as a minimum.

PRESSURE TESTING

Test pressures at least once a week with an accurate tyre pressure gauge when tyres are cold and always before long journeys. Do not 'bleed' air off when tyres are hot as pressures rise due to heat but fall again when the tyres cool.

VALVE CORES AND CAPS

Loss of pressure may sometimes be due to valve cores not seating properly or being worn. Check valve cores, tighten for correct seating or replace as necessary. Always fit valve caps (finger tight) as they keep dust from the valve mechanism and act as an extra seal.

TUBELESS TYRES

Valves should be kept in good condition and replaced when a new tyre is fitted.

WIRE WHEELS

Ensure that proprietary rim tapes are in good condition; a protruding spoke head can damage a tube and cause a puncture.

ALIGNMENT

Ensure wheels are correctly aligned and inspect regularly. Be aware of your tyres through frequent visual examination and before any long journey. Worn tyres are more susceptible to damage and road holding is reduced in the wet. To maintain full stability on high performance machines it is advisable to change the tyres before the legal 1mm ($\frac{1}{32}$ ") remaining pattern depth is reached.

DAMAGED TYRES

Damage which exposes the casing is dangerous and contravenes tyre legislation. Replace damaged tyres immediately.

STONES

Remove any stones or nails which may become embedded in the treads of tyres. If left they will eventually penetrate through the casing and cause a puncture, leading to breakdown on the road or even an accident.

OIL AND GREASE

Rubber deteriorates when in contact with oil and grease. Remove from tyres using a cloth slightly damped with petrol.

CARE OF TUBES

Repairs to tubes should ideally be carried out by an expert and should be vulcanised - hot or cold process. It is recommended that a new tube should be fitted with a new tyre. Tubes which have given long service become stretched and when fitted with new tyres may fail prematurely because of creasing or thinning of the tube rubber. Tubes with several repairs should be discarded.

REPAIRS TO TUBELESS TYRES

The main advantage of a tubeless tyre is its ability to withstand penetration by nails etc without a rapid loss of air. This also means that a rider can be unaware of a puncture and if the tyre continues to be used for long distances, the area of damage will spread and could become serious. Tyres must therefore be inspected regularly for nails etc, and repairs carried out as quickly as possible.

In instances where deflation has occurred, such as a nail penetration, it is essential to remove the tyre from the rim for a full external and internal examination before attempting any form of temporary or permanent repair.

Providing there is not other damage to the tread or casing Cooper-Avon recommends that only certain types of repairs should be carried out and these only in the crown area of the tyre. Plug repairs to punctures in the shoulder or sidewall area of the tyre are not recommended.

It is essential to follow the material manufacturer's instructions. Repair by buffering the tubeless lining and applying a cold cure, or vulcanised repair, of minimum 25mm (1") diameter to seal a penetration of not more than 3mm ($\frac{1}{8}$ ") diameter. The external hole should be sealed with rubber sealant to prevent the ingress of moisture which could affect the casing cords.

NB. Straight plug type repairs must not be attempted as there may be insufficient tread rubber and casing material to provide sufficient security for the plug location.

In the event of an emergency 'get-you-home' repair, it is permissible to use an inner tube of the correct size and type but the Motorcycle Manufacturers' Instruction Manual should be consulted. In some instances, an adaptor collar may be required if car-type rubber tubeless valves of greater diameter than the standard metal type have been used originally.

If tyre foam filler repairs are used as an emergency measure the tyre will have to be replaced when you return home. The chemicals in these products decompose the rubber linings of tyres.

For repairs other than those already described, a tyre fitter, working to the BS159F repair condition standard and expert in permanent repairs, should be consulted. If any major reinforcement is required to repair the damage the tyre must not be used, particularly on a high performance machine, because of possible problems with impaired vehicle stability and imbalance at speed.

These recommendations may appear to be over-cautious, but riders who have experienced sudden tyre deflation will appreciate how dangerous this can be.

BALANCE

Avon tyres are made to fine tolerances but it is essential that the tyre/wheel assemblies should be balanced - particularly if high speed runs are contemplated. The wheels themselves should run true to within 1mm ($\frac{1}{32}$ ") and be free from distortion. Tubeless tyres and wheel assemblies can be balanced by using self-adhesive or clip-on weights. Spoked wheels should be balanced by using spoke weights, or by wrapping the outer end of the spoke adjacent to the light spot with lead wire until the wheel, freely rotating on its bearing, shows no tendency from one particular section (a heavy spot) to swing to the bottom-most point. If using lead wire, bind the lower end with the adhesive tape to prevent moving. Fine balance is more important on front than rear wheels.

ON THE ROAD

Drive reasonably. Excessive acceleration and braking shortens tyre life considerably. Some uneven wear on front tyres is inevitable due to the effect of braking and cornering, particularly if the machine is used to its full capacity.

Tread Wear

A summary of the various factors that can cause abnormal wear.

UNDERINFLATION/OVER-LOADING

These conditions, singly or in combination, cause undue tread distortion resulting in irregular wear. More seriously they may result in the sudden failure of the casing due to excessive tyre flexing.

SPEED

High speed means rapid tread wear, not only because of the speed itself but because of the harder acceleration and extra braking entailed.

CLIMATIC CONDITIONS

Tread wear is usually more rapid in summer than in winter because of the higher ambient temperatures and drier conditions of the roads.

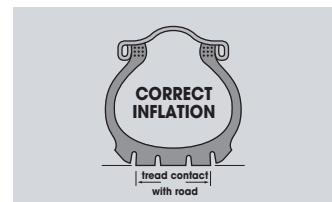

OIL AND GREASE

Tread rubber rapidly absorbs oil and grease and its resistance to wear deteriorates in consequence.

Correct Inflation

Tyre pressures govern tyre life. They also have a profound effect on stability and anti-skid properties.

The compressed air within the tyre assembly carries the entire load of machine and rider so it is vital to maintain correct pressures.

CORRECT INFLATION

The correct pressure ensures maximum mileages with satisfactory cushioning, stability and road holding properties. The tyre is kept at the contour at which it was designed to run.

STOPPING AND STARTING

Fierce acceleration and hard braking subject the tread to severe strains. Rapid wear results.

ROAD SURFACES

Rough road surfaces lead to cut treads and lower mileages – reduce speed accordingly.

MECHANICAL IRREGULARITIES

Mechanical defects which cause severe tread wear include distorted wheels, incorrect brake adjustment, worn dampers, excessive tolerances on steering head or swinging arm bearings, and incorrect frame/wheel alignment.

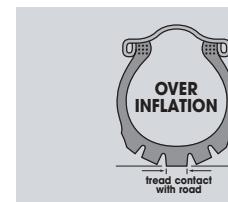

UNBALANCED WHEELS

Any unbalanced rotating weight such as heavy spots on the rims, security bolts etc., can cause irregular tread wear.

UNDER INFLATION

Insufficient air pressure or the wrong tyre fitment accelerates tread wear and creates undue stress on the tyre casing. It also increases the risk of accidental damage, adversely affects handling and increases power absorption.

OVER INFLATION

Excessively high pressure causes rapid wear in the centre of the tread. There is also a greater danger of casing fracture and tread cutting.

Tyre and Rim Fitments

Avon motorcycle tyres have been designed to be fitted to the following rim contours:

1 WM Series (flat ledge bead seat)

2 MT or TL (5° taper bead seat)*

3 CP (Contre Pente or reverse 4° taper)

4 3.00D x 16*

*Including those wider rims which incorporate safety humps.

Avon motorcycle tyres MUST NOT be fitted to CM contour rims which are principally fitted to some Harley Davidson motorcycles.

INTERCHANGEABILITY OF TYRES

Standard (100% height to width ratio) tyres such as the Speedmaster MKII and SM MKII may be replaced with (90%, 80%, 70% or 60% height to width ratio) provided that load carrying capacity, rim size and physical dimensions are taken into account. Roadrider tyres may be selected by comparing data shown in this manual, or if in doubt use the Avon Fitment Guide.

NB. These possible interchanges are based on rim sizes only. It is important that the tyres selected have at least the load capacity of the tyres replaced and that there is adequate clearance when fitted.

< 45 Metric Series - Radial

The recommended/measuring rim is in **bold**. Sizes in brackets are for diagonal only, not radial. *For tyre sizes 130/90-16, 5.00-16 and 5.10-16, a 3.00D rim is permitted.

Storage of Tyres

INTRODUCTION

In view of the harmful influence of temperature, humidity and light, inside storage is essential and should comply to BS AU50: Part 1: Section 8: 1989.

HUMIDITY

The store room should be cool, dry and moderately ventilated. Moist conditions should be avoided. Care must be taken to ensure no condensation occurs.

LIGHT

There should be protection from sunlight and strong artificial light with a high ultra-violet content. Room lighting with ordinary incandescent lamps is preferable to fluorescent tubes.

TEMPERATURE

The storage temperature should be below 77°F (25°C) and preferably below 59°F (15°C). At temperatures exceeding 77°F (25°C) certain forms of deterioration may be accelerated sufficiently to affect the ultimate service life. Direct contact with pipes and radiators must be avoided.

The effects of low temperature are not permanently deleterious, but can cause the products to stiffen. Care should be taken therefore to avoid distorting them during handling at that temperature. When they are taken from low temperature storage for immediate use, their temperature should be raised to approximately 68°F (20°C) throughout before they are put into service.

OXYGEN, OZONE AND CHEMICAL AGENTS

As ozone is particularly harmful, storage rooms should not contain any equipment generating ozone such as fluorescent lighting, mercury vapour lamps, electric motors or other equipment which may

produce sparks or other electrical discharges. Combustion gases and vapours which may produce ozone via photochemical processes should also be excluded.

Solvents, fuels, lubricants, chemicals, acids, disinfectants and the like should not be kept in the store rooms. Rubber solutions should be stored in a separate room and the administrative regulations on the storage and handling of inflammable liquids must be observed.

DEFORMATION

Products should be stored in a relaxed condition free from tension, compression or other deformation since these may cause cracking or permanent distortion.

ROTATION OF STOCKS

To avoid deterioration storage time must be minimised. Stocks should be issued from the stores in rotation so that those remaining in storage are of the latest manufacture or delivery.

SHORT TERM STORAGE

For short term storage (up to 4 weeks) tyres can be stacked horizontally, one on top of another, on wooden gratings but the height of the stacks should not exceed 4 ft (1.20 metres). After 4 weeks the tyres should be restacked, reversing the order of the tyres.

LONG TERM STORAGE

For long term storage tyres should be stored upright in a single layer on shelf racks with at least 4" (10 cm) clearance above the floor. To avoid deformation it is advisable to rotate them slightly once a month. Avon Motorcycle Tyres recommend tires should be used within 5 years of the manufacturing date on the tyre. The tyre should then be removed after a total of 7 years from the manufacturing date. Tyres beyond this date will not be warranted.

Important Information

Tyres are the only part of your motorcycle which are in contact with the road. Safety in acceleration, braking, steering and cornering all depend on a relatively small area of road contact. It is therefore of paramount importance that tyres should be maintained in good condition at all times, and that, when the time comes to change them, suitable replacements are professionally fitted.

It is essential that you refer to your machine manufacturer's handbook when buying and fitting replacement tyres. Changes in tyre size, type and construction should not be made without first seeking advice from the machine or tyre manufacturer, since fitting the wrong tyre may have an adverse effect on handling, safety and wear.

Avon motorcycle tyres are only for use on vehicles for which motorcycle tyres were originally specified by the vehicle manufacturer, any other use may be dangerous.

Motorcycle tyres which have been subject to use on rolling roads (Dynos) must no longer be used for subsequent, normal service. Use of Avon motorcycle tyres on a rolling road (Dyno) will invalidate the tyre warranty. All tests on rolling roads (Dynos) must be carried out with test tyres, special tyres reserved for maintenance purposes, or tyres which are worn out or downgraded.

For fitment recommendations please see Cooper Tire UK Motorcycle Fitment Chart or consult Cooper Tire Customer Service Division. All speeds stated in this brochure are subject to observance of the appropriate national speed limits.

Fitting Precautions

An inflated tyre contains a huge amount of trapped energy. When released in the form of an explosion, this energy can kill or seriously injure the unwary. Tyre changing can be dangerous and should only be carried out by trained personnel. It is strongly advised that the following precautions are taken when fitting or removing tyres.

- 1 Wheels do not have an infinite life and particular attention should be paid to the detection of corrosion, damage, distortion and cracking. Under no circumstances should hot work be carried out to any wheel to which a tyre is fitted. The inflation of tyres with nitrogen does not make hot work safe. Do not heat up any wheel when it is fitted with a tyre using direct heat (i.e. naked flame) from hot working equipment or forced air space heaters. Violent explosions can occur. Unsuitable wheels should be discarded; no attempt should be made to repair them.
- 2 It is essential that all tyre/wheel assemblies are inflated inside a safety cage or within a portable safety inflation device. Defective beads, poor bead seating are typical causes of an explosive deflation. In all cases an in-line pressure gauge should be used, and air line controls must be of the 'dead man handle' type.

An assembly under inflation must never be left unattended. Air line should be fitted with a clip-on chuck and be at least 3 metres in length.

- 3 Examine the tyre for damage both inside and out. Damaged tyres can explode during inflation.
- 4 Before fitting ensure the tyre and the tube (if required) are in good condition and compatible in size.
- 5 Always use an approved bead lubricant when fitting a tyre to avoid damage to the tyre and ensure correct bead setting.
- 6 Make a physical check of the tyre/wheel assembly before attempting to inflate.
- 7 Establish the approved pressure for the tyre/wheel assembly. Inflate GENTLY to no more than 1 Bar (14.5psi) and again check that the assembly is fitting correctly, before continuing inflation to approved pressure.
- 8 Always before inflation of the tyre, the wheel should be placed inside a safety cage or within a portable safety inflation device.

Important Fitment Advice

It is essential that you refer to your motorcycle manufacturer's handbook when buying and fitting replacement tyres. Changes in tyre size, type and construction should not be made without first seeking advice from the motorcycle or tyre manufacturer, since fitting the wrong tyre may have an adverse effect on handling, safety and wear.

Avon motorcycle tyres are only for use on vehicles for which motorcycle tyres were originally specified by the vehicle manufacturer, any other use may be dangerous.

Motorcycle tyres which have been subject to use on rolling roads (Dynos) must no longer be used for subsequent, normal service. All tests on rolling roads (Dynos) must be carried out with test tyres, special tyres reserved for maintenance purposes, or tyres which are worn out or downgraded.

For fitment information, please see Avon Tyres' Motorcycle Application Guide or consult Cooper Tire, Motorcycle Technical Product Dept. For any non-listed fitments, contact Cooper Tire via the website, Motorcycle Helpline Tel: 0870 9029276. Fax: (01225) 791301.

All speed stated in this list are subject to observance of the appropriate national speed limits.

WARNING

Before fitting an Avon motorcycle tyre, refer to our Motorcycle Data & Fitment Guide - it contains important information concerning safety.

TYRE NOTATIONS AND MARKINGS

Tyre notations in this publication fall into three distinct categories according to their construction type.

CROSSPLY TYRES

Crossply tyres are denoted by the inclusion of a dash within the notation. E.G. 230/60-15 86H

BIAS BELTED TYRES

Bias Belted tyres are denoted by the inclusion of a letter 'B' within the notation. E.G. 140/90B16 77H

RADIAL TYRES

Radial tyres are denoted by the inclusion of a letter 'R' within the notation. E.G. 120/70R17 (73W)

In all cases, the speed rating is incorporated within the speed and load index following the notation.

NOTE: The introduction of European Regulations ECE R75 has resulted in a more precise expression of speed indices. For example, almost all 'Z-rated' tyres now carry a 'W' within the load speed marking. Whereas the 'Z' indicates a tyre's capacity to run over 149mph (240kph), the letter 'W' indicates that it is capable of running at 168mph (270kph) or higher if the speed and load index is enclosed within brackets.

Actual tyre sidewall markings will continue to include the speed symbol within the notation.

AVON MOTORCYCLE TYRES STANDARD LIMITED WARRANTY

Every first quality tire bearing our name and serial number and not branded "NA", or "DA" for BLEM (flat) tires, and not used for racing, is warranted to be free of defects in workmanship and material during the life of the original tread design. Original tread life is completed when the tire is worn to 2 remaining 32nds (1.5mm). Avon Motorcycle Tyres recommend tires should be used within 5 years of the manufacturing date on the tire. Tire should then be removed after a total of 7 years from the manufacturing date. Tires beyond this date will not be warrantied.

If, upon presentation of a tire, our examination shows a tire is eligible for adjustment credit under the terms of the warranty, we will make a reasonable allowance on the purchase of a new tire based on the current "Suggested Retail Price". Any such allowance will be based on the tread wear remaining as set forth in the adjustment policy available from the company.

This warranty is made for the exclusive benefit of the original owner actually using these products, is not assignable, and no claim will be recognized unless submitted on our standard claim form duly filled out and signed by the owner, dealer, or distributor.

This warranty does not in any way extend to any consequential damages or losses.

There is no other warranty, or liability, expressed or implied, applicable to these products. No representative has the authority to make any representation, promise, or agreement except as stated herein.

Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

TIRE ADJUSTMENT POLICY

Any Avon Motorcycle Tyre that does not deliver satisfactory service due to a balance, out of round or a ride complaint problem will be replaced without charge within the first 2/32nds (1.5mm) of the tire's tread life. After 2/32nds (1.5mm) of wear, tires with the aforementioned conditions are not warrantable.

Any Avon Motorcycle Tyre that becomes unserviceable as a result of an eligible adjustable condition during the first 50% of tread wear will be replaced FREE OF CHARGE. A tire worn beyond 50% of tread wear that exhibits an eligible adjustable condition will be replaced on a pro-rated basis only.

No adjustments will be made in cases of abuse by user, such as, but not limited to:

- Road hazard*
- Cut by vehicle
- Trued tires
- Nail holes, cuts, punctures*
- Under or over inflation
- Run flat
- Wheel alignment

*Some exceptions may apply. See Road Hazard Policy for further details.

TIRES: RADIAL VERSUS BIAS

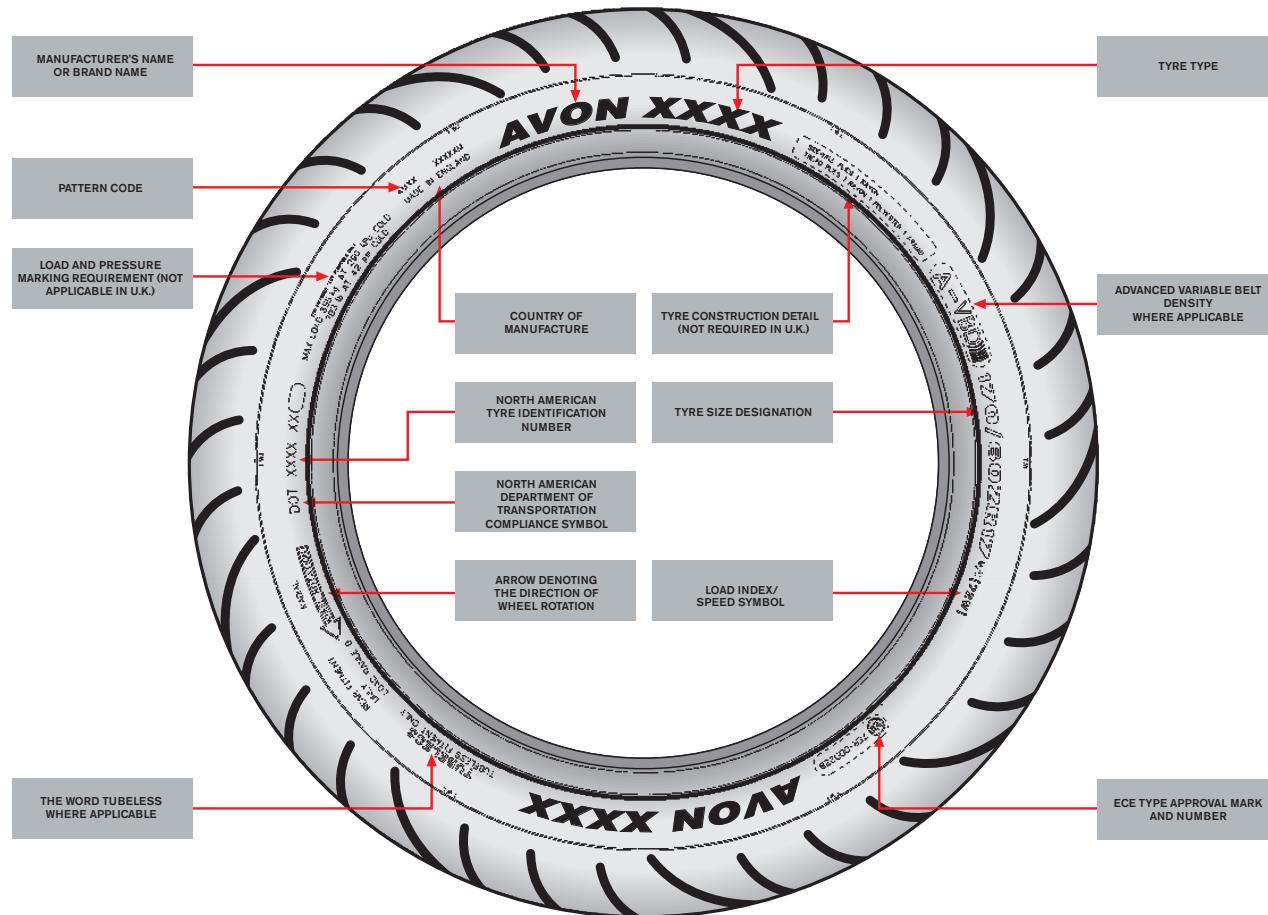

While running a bias ply front tire and a radial rear tire can be acceptable in certain applications, you should never run radial front and bias rear as this can create an instability issue.

Avon Motorcycle Tyres is not responsible for abnormal wear due to suspension modifications and/or improper maintenance.

MOTORCYCLE TYRES

When new motorcycle tyres are fitted, they should not be subject to maximum power until a reasonable 'running in' distance has been covered. 100 dry miles (160km) is the recommended minimum (discount any wet miles covered). Tyres should then be visually examined and their inflation pressures checked before riding.

Tyre Markings

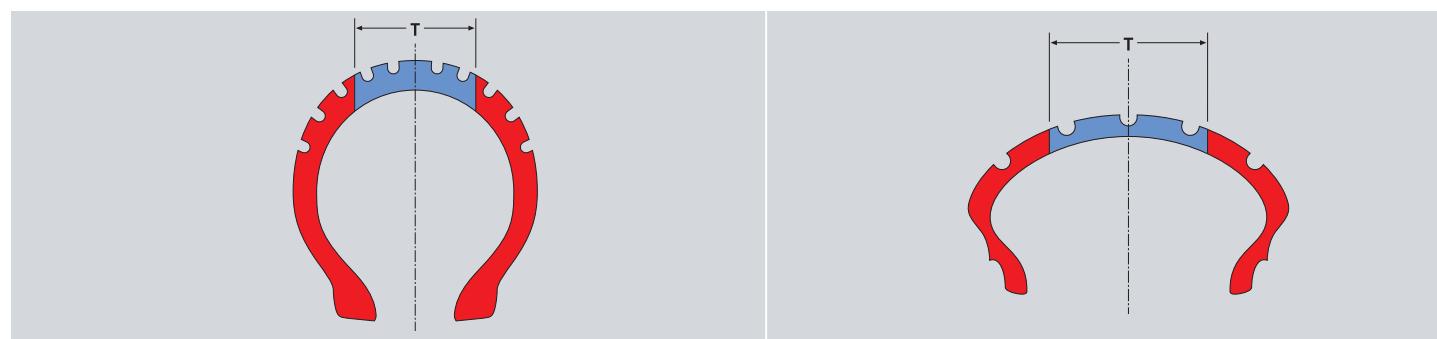

Tyre Repair Precautions

Table 1: Motorcycle & scooter tyre damage limits (after preparation)

SPEED SYMBOL	Up to J	Above J and up to and including V	Above V
Max size of damage (diameter)	1/4" (6mm)	1/8" (3mm)	No repairs shall be permitted
Max. number of repairs	2	1	

Repairable & non-repairable areas for motorcycle & scooter tyres

RED AREAS: Non-repairable parts of the tire - do not attempt to repair tyres damaged in these areas.

BLUE AREAS: It is permissible to do certain repairs in this part of the tire. $T = 50\%$ of the nominal width.

No repairs permitted to Wind On Belt construction tyres (WOB/AVBD).
